

## Assembling technology of terminals

**Material and surface:**

- terminals: KSD; LO; LW; B311 – tin-plated.
- screws: KSD; KSC: Cu – tin-plated;  
steel – chrome-plated.

**Application:**

The terminals are used for fixing wire with a screw-joint to a bus-bar, switchgear housing electrical device and apparatus, etc.

**Assembling technology:**

The terminals: KSD; KSC are mounted on wires by means of a screw joint, which is an integral part of the terminal, by screwing two or four screws with a screwdriver. The terminals: B311; LO and LW are soldered on wires (they can be pre-crimped on the wire).
