

FEATURES & BENEFITS

silicone grease

LOGISTIC DATA

Type	S-97/200 ML
Index Ergom	E05CE-01010101901
Quantity in package [ml]	200

It is a highly protective, insulating and colourless grease designed to protect electronic and electrical equipment frequently exposed to electromagnetic or Radio Frequency interferences, high temperatures, atmospheric elements and oxidising agents. Eliminates leakages of current, short circuits and corona effect in the antennas. Facilitates heat transfer away from electrical or electronic components. Quickly displaces water and moisture, lubricates and preserve plastic gears and supports, seals, rubber bellows and gaskets, clamps... etc. Rapidly drying, leaves a thin transparent film of non-flammable and non-conductive coating. All properties and physical specifications remain stable from -50 ÷ +220 °C. Doesn't affect plastics.
